ABSTRACT

A shipment management system includes a shipment management server (1), a database (2), a network (3), and a plurality of client computers (4). The shipment management server includes a basic data receiving module (10) for receiving basic data; a product warehousing module (11) for warehousing products; a shipment sheet generating module (12) for determining clients to which products are shipped, shipping dates, and generating shipment sheets; a shipment sheet processing module (13) for collecting shipment sheets, generating an accumulative shipment sheet for each client, and arranging for packing of products to be shipped; a shipment confirming module (14) for confirming shipment, and transmitting the confirmation of shipment to an external system (5); and a report generating module (15) for generating shipment reports. A related shipment management method is also disclosed.
